

CURRICULUM VITAE

Name: Vikas Kasaudhan

B.Tech - Computer Science and Engineering

Roll number: 24CS8144

Gender: Male

Date of Birth: 10/09/2005

Category: GEN-EWS

E-mail: vikaskasaudhan542@gmail.com

Contact: +91 8127087231

Address: Ramaya , Post-Sukrauli Chaudhary , Harraiya , Basti (UP-272155)

Educational Qualification:

• Graduation-

SEM	1	2	3	4	5	6	7	8
SGPA	8.43	8.45	8.54	7.73				
CGPA	8.43	8.44	8.48	8.3				

• Higher Secondary And Secondary

Year	Degree/Examination	Institution/Board	Percentage
2022	Class XII	UP BOARD	83.2
2020	Class X	UP BOARD	89.67

Technical Skills:

Languages: C, C++, Python, SQL

Web Technologies: HTML, CSS, JavaScript

Python Libraries: Pandas, Matplotlib, Seaborn, Scikit-learn, PyTorch

Tools & Platforms: Git, GitHub, Linux/Unix Command Line, VS Code, Jupyter Notebook, MySQL

Software Engineering: Data Structures & Algorithms, Object Oriented Programming (OOP), Problem Solving & Debugging

Area of Interest: Artificial Intelligence & Machine Learning

Projects:

Campus Jugaad – Hyperlocal Student Marketplace (Team Project | In Development) | [\[GitHub\]](#)

- Collaborated on developing a P2P campus marketplace connecting **5,000+ students** for micro-tasks (e.g., printing and delivery) using the MERN stack, aiming to reduce students' logistical downtime.
- Implemented a secure Escrow & OTP-based transaction workflow to lock funds upon task acceptance and automate refunds for expired tasks.
- Developed a privacy-focused in-app messaging module that masks personal contact information for secure communication between users.
- Contributed to deploying the application on Vercel, implementing features including a Trust Engine, gamified quests, dispute resolution with automated email support, and race-condition-safe transaction handling.

Clinical Heart Disease Risk Prediction System| Python, Scikit-learn [\[GitHub\]](#) | [Live Demo](#)

- Developed a machine learning system to predict heart disease risk using clinical patient data.
- Performed data preprocessing, EDA, and feature selection to improve model performance.
- Trained a Logistic Regression model achieving **88.2% Accuracy, 87.8% Precision, and 85.6% Recall**.
- Created visualizations to identify key health indicators and support data-driven insights.
- Built an end-to-end pipeline for data preparation, model training, prediction, and evaluation.

SDigital DebtBook — Full-Stack Digital Debt Management System

React.js | Flask | PostgreSQL (Neon) | JWT Authentication | Tailwind CSS | Render | Vercel | [\[GitHub\]](#)
| [Live Demo](#)

- Developed a full-stack debt management application that enables users to securely record, track, and manage money lent and borrowed through an intuitive web interface.
 - Designed a responsive React frontend with Tailwind CSS and integrated a Flask REST API secured with JWT-based authentication for user registration and login.
 - Implemented PostgreSQL (Neon) as the backend database to manage users, people, transactions, reminders, and financial records with efficient relational data modeling.
 - Built modules for customer management, transaction history, balance calculation, dashboard analytics, search functionality, reports, and database backup to simplify debt tracking.
 - Deployed the application using Vercel (frontend) and Render (backend), providing a scalable, cloud-hosted solution with secure API communication and persistent data storage.
-

Achievements:

- **3rd Place Winner, Hack The Winter 2.0:** Awarded 3rd place in the national-level hackathon organized by Graphic Era Hill University (Team Sashwat, 2026).
- **Problem Solving:** Solved 180+ Data Structures and Algorithms (DSA) problems across platforms including LeetCode, CodeChef, GeeksforGeeks, strengthening algorithmic thinking and problem-solving skills.
